

Lee Dyer

Full Stack Software Engineer

1-231-881-8138 | Asheville, NC | Targeting onsite/hybrid: USA | Open to self-financed relocation

lee.dyer.dev@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SKILLS

- Experience crafting and deploying MVPs from the ground up using strict **TypeScript** in **React**
- Working with Git and **GitHub** to collaborate effectively on a team
- Test Driven Development using **Vitest** for unit and integration testing
- **PostgreSQL** and **MongoDB** for database development and management
- **Node**, **Next.js**, and **Flask** for backend services and communication with external resources
- Extensive knowledge of **HTML**, **CSS**, **Tailwind**, **Python**, Flask, 3rd-Party APIs
- Use of **AWS** including **S3** for storage, and **EC2** for deploying containerized applications

RELEVANT EXPERIENCE

Software Engineer ~ Aktiga

February 2024 - present

Asheville-based SaaS product development firm focused on creating immersive technology solutions.

- Agenda Keeper ([Live Site](#))
*A full-stack **React**, **Node**, and **TypeScript** application built with **Next.js***
 - Crafted custom **SQL** functions to trigger cascading events for new users/agendas
 - Integrated **React-Hook-Form** with **Zod** for form validation and error messaging
 - Designed and implemented tests in **Vitest**, ensuring quality work for each addition to the code base
- Prysm Demo ([Live Site](#))
*A **React**, **Node**, and **TypeScript** application utilizing **Three.js** and **ReactXR** for immersive VR*
 - Assisted in **CI/CD** flow including GitHub Actions, custom linting, strict **TypeScript** configurations
 - Implemented custom teleportation mechanics using **React Three Fiber**, **ReactXR**, and **Three.js**
 - Became adept at interactive rebasing in **Git**, as well as incorporating feedback from code reviewers

Software Engineer ~ Co.Lab

March 2024 - May 2024

A Product Development bootcamp focused on teamwork and **Agile** methodologies

- Write A Bad Song | [Live Site](#) | [GitHub](#)
*A **React**, **Node**, **TypeScript** application that integrates with Twilio API for live reminders*
 - Built and deployed a viable market-researched MVP in under 8 weeks
 - Established and participated in weekly sprint meetings, daily standups, and end-of-week retros
 - Maintained a backlog of user stories, translating them into actionable items for the team

Software Engineer ~ Coding Temple

October 2023 - January 2024

A Full-Stack Software Engineering bootcamp focusing on fundamentals with **Javascript/Python/React/Flask/SQL**

- Asheville | [Live Site](#) | [GitHub](#)
*A web-scraping **Flask** app containerized with **Docker**, using **Playwright** and **Beautiful Soup***
 - Overcame significant technical hurdles such as installing the executables of a headless version of Chrome in a containerized app, integrating Playwright to load dynamic content, and optimizing database queries to consolidate data and improve performance
 - Enforced **SOLID** principles through refactors separating logic into modules, and removing repetitive code in favor of re-usable pure functions

EDUCATION

Certificate Full Stack Software Engineer - Coding Temple - January 2024

Certificate Agile Team Software Engineer - Co.lab - May 2024
